HERSS Summer School 2020

How to Make Theory Work in Higher Education Research and Science Studies

07.-11. September 2020, Hannover, Germany

How do you *do theory*? While the craft of methods and empirical work more generally is often made explicit in higher education research and science studies, theory work usually remains implicit. The aim of the summer school is to make explicit how we work with theories, and how we make them work. We would like to discuss the craft of theorizing, explore routines and strategies of doing theory, think about opportunities and blind spots of theory work, and uncover the positions and relations theories can have in our research. The summer school will give early career researchers in higher education research and science studies the opportunity of a reflexive hands-on approach to theory. It will provide a context to reflect the theory work in one's own research and discuss it with eminent scholars of theorizing in the fields of higher education research and science studies and beyond.

Topics include but are not limited to

- Different meanings of “theory”
- Theory developments in higher education research and science studies
- Theory orientation(s) in interdisciplinary fields
- Doing theory and how to theorize
- Falsifying and contextualizing theories
- Relations between theories, methods, and empirical evidence
- Updating the classics and arguments against theory/theories

Please visit www.herss-summer.eu for further information on the summer school, including application fees, travel grants, and the application procedure. Applications have to be made via the application forms on the website! Deadline for applications is **April 22nd 2020**.

We are looking forward to your submissions!

Organization: Julian Hamann, Christian Imdorf, Anna Kosmützky
